

Statement in Support
House Bill H. 112 – *An act relating to the labeling of food
produced with genetic engineering.*

We, the undersigned, are Vermont farmers and food manufacturers who fully support H.112 which requires the labeling of foods sold in Vermont that contain genetically engineered (GE) materials.

We believe that consumers in Vermont, and everywhere, have legitimate concerns about the potential health effects and environmental impacts of GE foods. They have a right to know if the foods they buy and serve to their families were produced using genetic engineering.

Furthermore, we believe that the labeling of GE foods will benefit many Vermont farmers and food manufacturers who will choose to expand production of non-GE food-grade crops and non-GE food products to meet growing consumer demand for non-GE foods.
